### TROPICAL CYCLONE BULLETIN NO. 3

#### Tropical Storm "JOLINA" (CONSON)

Issued at 5:00 PM, 6 September 2021

Valid for broadcast until the next bulletin at 8:00 PM today

#### HAZARDS AFFECTING LAND AREAS

##### Heavy Rainfall

In the next 24 hours, "JOLINA" may bring moderate to heavy rains at times intense rains over Northern Samar, Eastern Samar, and Sorsogon. Moderate to heavy rains over Bicol Region and the rest of Visayas. Under these conditions, isolated to scattered flash flooding and rain-induced landslides are possible especially in areas that are highly or very highly susceptible to these hazard as identified in hazard maps.

##### Severe Winds

- The tropical storm will bring strong to gale-force winds over the areas where Tropical Cyclone Wind Signal #2 is hoisted.
- Strong winds (strong breeze to near gale conditions) with occasional gusts will be experienced in areas where Tropical Cyclone Wind Signal (TCWS) #1 is in effect.

#### HAZARDS AFFECTING COASTAL WATERS

In the next 24 hours, Tropical Storm "JOLINA" may bring moderate to rough seas (1.2 to 2.8 m) over the eastern seaboard of Visayas and Mindanao. Mariners of small seacrafts are advised to take precautionary measures when venturing out to sea. Inexperienced mariners should avoid navigating in these conditions.

#### TRACK AND INTENSITY OUTLOOK

- On the forecast track, "JOLINA" will track generally northwestward parallel to the east coast of the country until it makes landfall over the Northern-Central Luzon area by Thursday morning (09 September). Afterwards, the tropical storm will move generally westward while traversing over the Northern- Central Luzon area and may re-emerge over the West Philippine Sea by Thursday evening. "JOLINA" is forecast to exit the Philippine Area of Responsibility by Friday morning (10 September). Given the uncertainty of the track forecast, a westward shift of the track may result to landfall or passed near the Eastern Samar or Northern Samar. The public is advised to continue monitoring for possible changes in the track forecast in the succeeding bulletins.
- "JOLINA" intensified into a tropical storm at 2:00 PM today. The tropical storm is forecast to slightly intensify as it moves over the Philippine Sea and may reach its peak intensity of 85 km/h by Wednesday (08 September). It will then slightly weaken as it moves over the rugged terrain of Northern-Central Luzon area.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 8:00 PM today.
